CLUSTER 120 SYSTEM OF WORK STATIONS AND DESKS

## CLUSTER 120 SYSTEM

The Cluster 120 Work Station is so named because of its distinctive 120° angled configuration.\* This innovative departure from conventional work surfaces offers many esthetic and functional advantages.

Augmented by optional 120 system equipment—such as pedestals, a shelf and organizer—the basic work station becomes a handsome and contemporary desk. When desired, screens provide privacy and deaden sound. The 120 is available in right- and left-hand versions. The short return of the desk determines the designation. Pictured, a left-hand 120 with pedestals at both short and long returns, a desk shelf and organizer.

...n of the 120 Work Station  
...d for a wide variety of office  
...es. Stepped platform will  
...moderate typewriters, calculators,  
...and word-processing and microfilm  
equipment. Even with large equipment,  
like the reader shown here, the 120  
provides more than ample desk-top space.

People who work together belong together. The classic cluster of three eliminates isolation and shortens the lines of communication. Reference material may be shared. Handling and processing of records occurs in a logical and orderly way. A cluster of three units is just one of many modular possibilities. Demonstrated, one left-hand machine version of the 120, one left-hand clerical 120 and one right-hand clerical 120; two pedestals with box and Pendaflex® system drawers. Shelves and organizers.

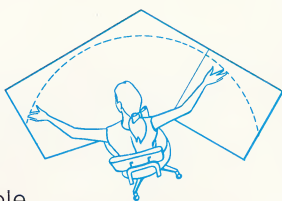

## CLUSTER 120 SYSTEM

ahead of its time, to meet today's needs.

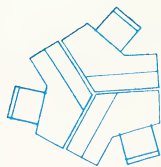

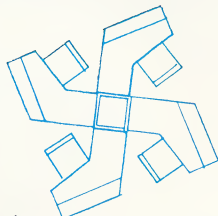

### designed for people

The 120° angled configuration of the Cluster 120 provides more reachable—and more usable—work surface than rectangular desks of comparable size. From the seated pivotal position, virtually all of the desk top is within arm's reach.

### designed for people who work together

Yes, people with related tasks belong together. Because of its wide modular capabilities, the Cluster 120 may be grouped in literally hundreds of different ways. How can it help you? One way to visualize this is by observing the work sequence of your office. Do records, for example, travel an indirect route? Is there too much traffic? Picture, for a moment, how the Cluster 120 Work Stations and Desks may be arranged to accommodate the work sequence. As a happy by-product, you'll find an appreciable diminishing of traffic. Forcing work patterns to conform to inflexible layouts—such as the maze of conventional rectangular desks—is inefficient and costly. The basic cluster of three 120s is an excellent demonstration of how records processing and work procedures may be handled in an orderly and logical way.

There are other, equally efficient, 120 arrangements. The 120 concept gives you the freedom to plan creatively to solve specific problems. The key is to use the desk not only as office furniture but as problem-solving equipment.

### designed for people who change their minds

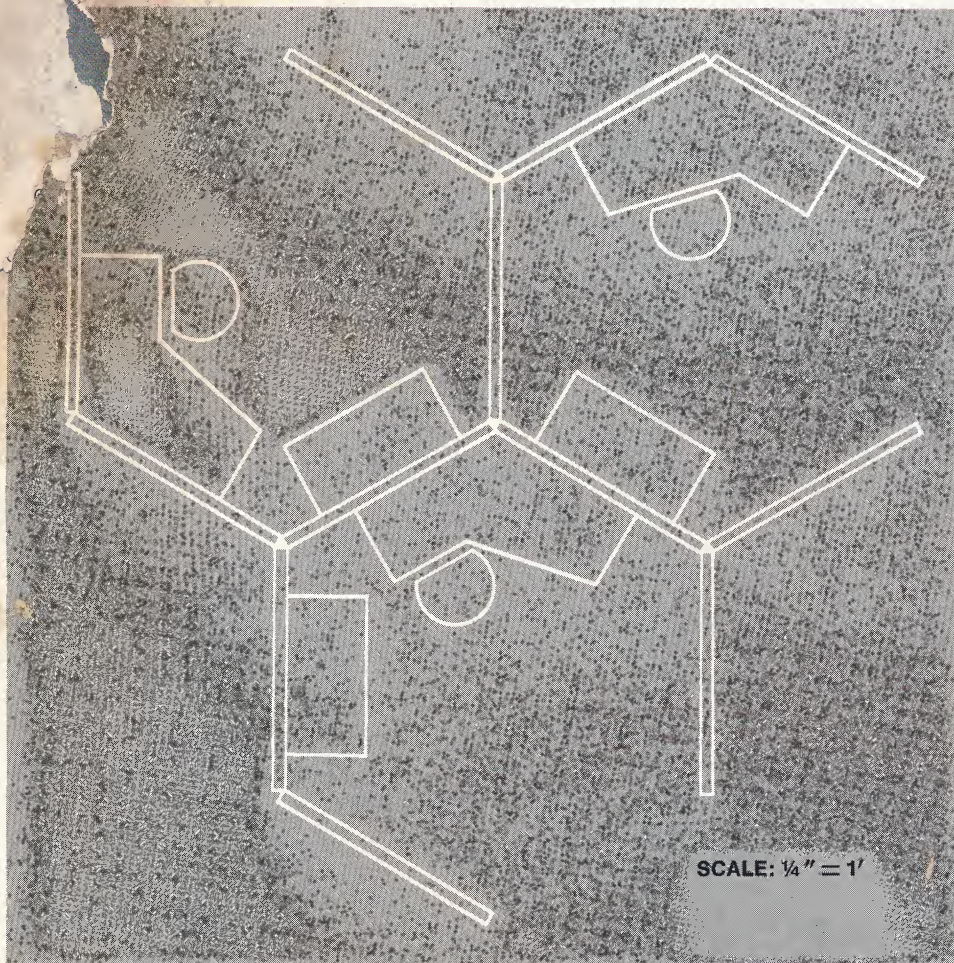

Few office floor plans are forever. Work requires change. The layout that worked well for one set of circumstances is inadequate for another. The Cluster 120 allows you to change layout with freedom that simply isn't possible with conventional rectangular desks. The dimensions—40" at the leading edges, from the apex to the sides; 20" at the sides—makes the 120 a highly modular unit. With these dimensions to work with, new arrangements may be fashioned from the basic cluster.

### designed for people and their environment

A pleasant environment is conducive to high productivity. An office that says "here's a nice place to work" is halfway toward attaining that goal. The Cluster 120 is designed with the environment in mind. In elegant good taste, and never overpowering.

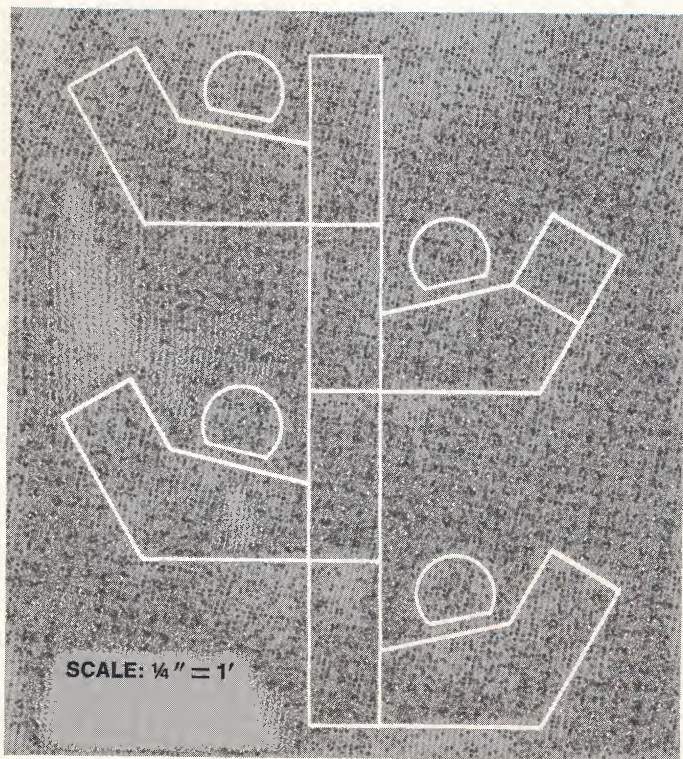

SCALE: 1/4" = 1'

**T**he honeycomb. This arrangement of 120 Work Stations with System 120 peripheral equipment has virtually limitless applications. Accounting. Sales. Personnel departments. In the foreground, a left-hand 120 with a calculator on the short return. On the left, a 20" x 40" utility table supporting a pivoting rack of binders and manuals.

Oxford lateral file cabinets and Design 80 Series mobile files are compatible with the Cluster 120 System.

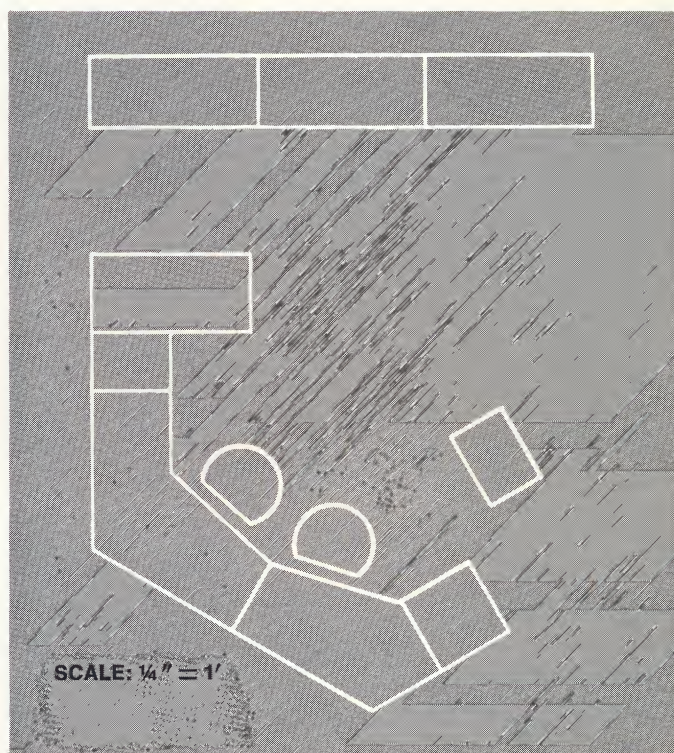

The long line, a sophisticated "conveyor" type plan that speeds information, records processing and services. Right- and left-hand Cluster 120s are divided by compatible two-drawer Oxford lateral file cabinets.

Specific applications would include inventory control and customer service departments. Others suggest themselves. With machine 120s for typewriters, the long line is especially appropriate for typing or secretarial pools.

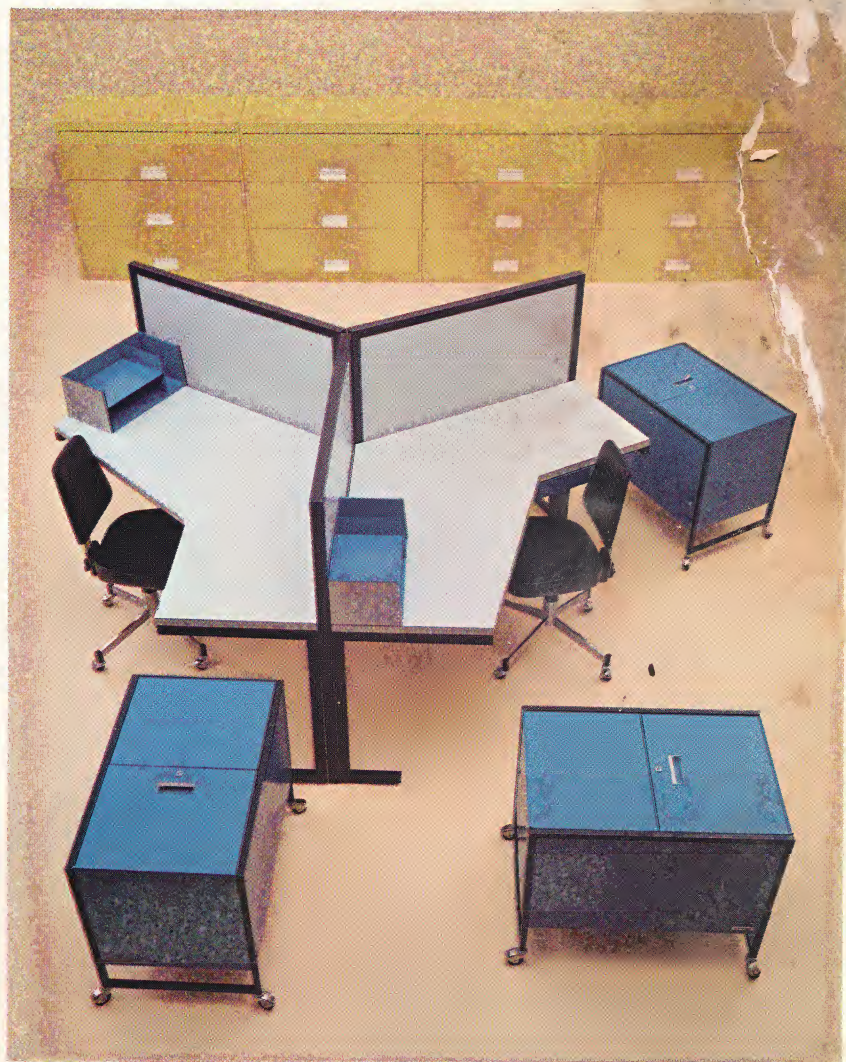

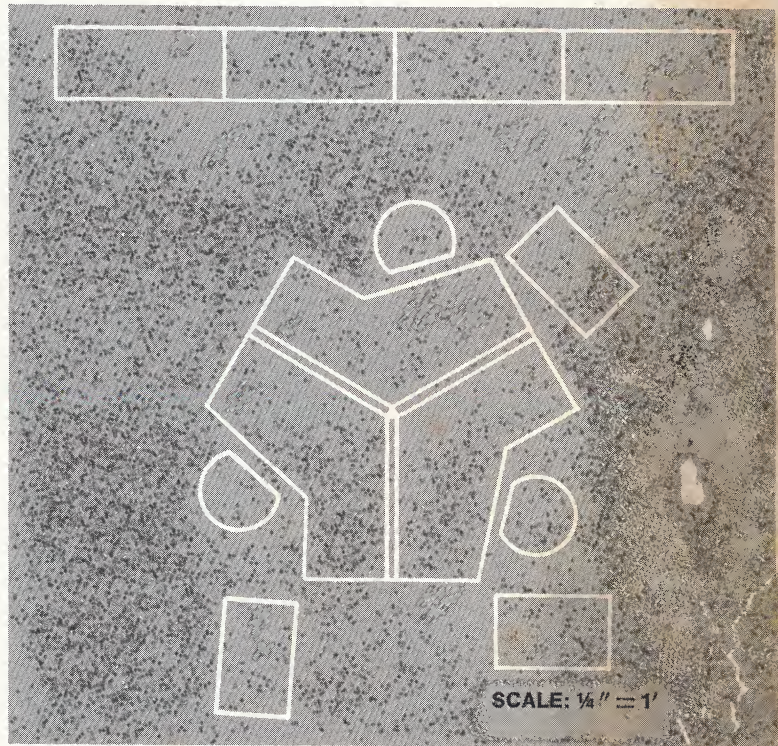

A modified "U" configuration as a clerical, secretarial or "assistant-to" station. Viewed counter clockwise: Three five-drawer-high Oxford lateral file cabinets. 20" x 40" utility table (or desk return). Stationary pedestal. Clerical 120 and machine 120 form the "U." Mobile pedestal with two drawers for Pendaflex filing.

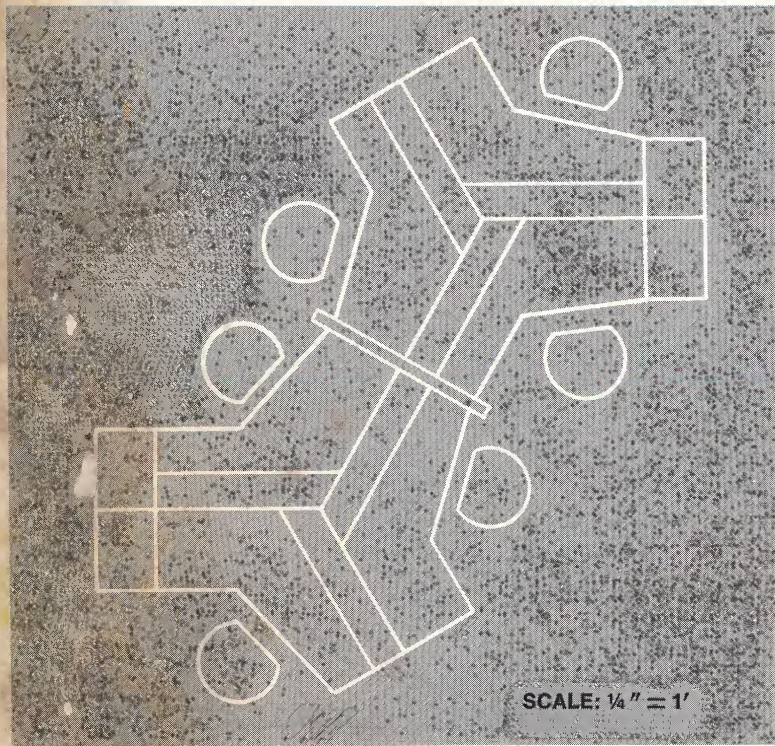

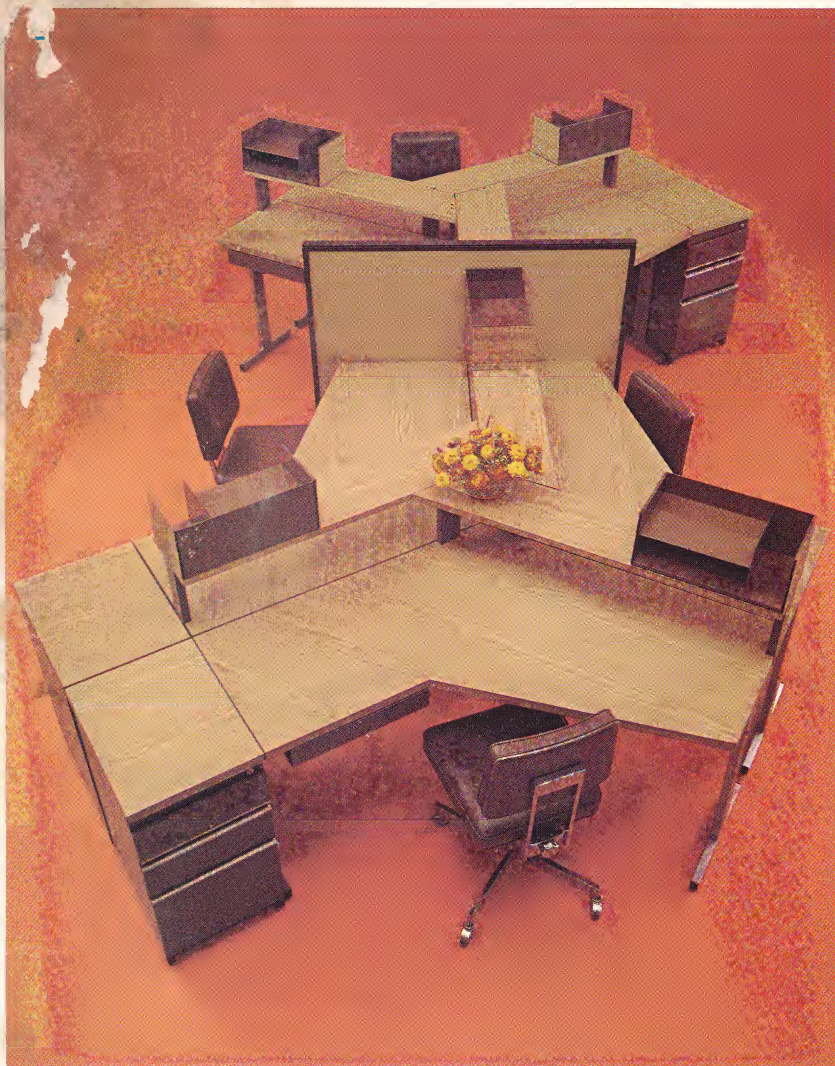

Screens and 120 Work Stations interlock and use common legs. The three Design 80 mobile files, shown here in one of three available finishes, accommodate burst or unburst 14 $\frac{7}{8}$ " x 11" computer printout in hanging binders or folders. Four three-drawer-high Oxford lateral file cabinets are in the background. The basic screens with 120 stations form a perfect carrel. With stationary and mobile files, the application may be extended to clerical uses.

Seat six. The basic cluster of three 120s may be extended by additional multiples to seat nine, or twelve. Or fifteen. The Cluster 120 lends itself to endless chain modularity. The plans illustrated in this brochure barely touch on all the possibilities. Floor plans may be tailored for all applications. The Cluster 120. Ahead of its time, to meet today's needs.

TM

## CLUSTER 120 SYSTEM

## GENERAL INFORMATION

Order numbers, prices and complete specifications for Cluster 120 Work Stations, Desks and optional equipment are published in a supplementary catalog and price list.

Certain revisions in design and construction features will occur from time to time under a continuing program of product improvement.

### FINISHES (STEEL CABINETRY)

Desert Sage 10	Brown 50
Oxford Gray 20	Charcoal 88
Black 80	Cordovan 52
Bamboo 18	Fern 45
Tan Mist 75	Shell Gray 25
Beige 15	Putty 95
Mist Green 30	Data Red 55
Data Blue 22	French Gray 40

Special colors (other than those listed) that must be matched to samples are subject to upcharges.

### PLASTIC LAMINATE TOPS

#### (Desk and Pedestal Tops, Lateral Cabinet Tops)

High pressure laminated tops in G.E.'s Textolite® are available in the following patterns, colors and simulated wood grain finishes:

Antique 1460-N	Gray 1491-N
Beige 1479-N	Putty 1481-N
Brown Leather 2269-N	Garrison Oak 9724-N
Beige Scrim TX-3979	Antique Leather 2234
American Elm 8600-T	Honey Teak 9214-N
Bahia Rosewood 8501-N	Gunstock Walnut TT-9542-T

Consult the Oxford color chart for actual color samples.

### LEGS

Satin chrome plated, equipped with levelling glides.

### WORK SURFACE (Efficiency Factor)

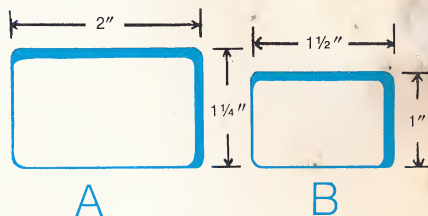

The Cluster 120 Work Station has a total work surface of 10¼ square feet, of which 9¾ square feet, or 95%, is within normal arm's reach.

### LEFT- AND RIGHT-HAND CONFIGURATIONS

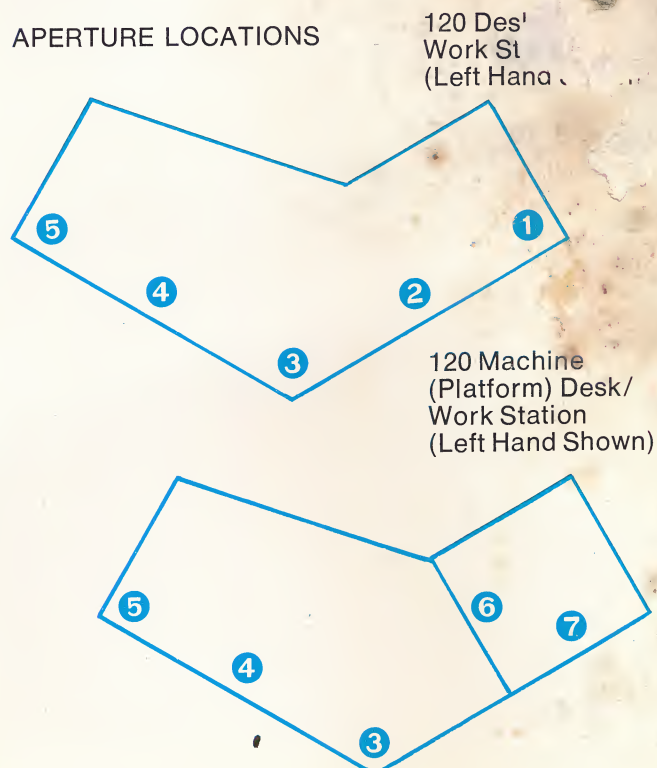

Cluster 120 Work Stations and Desks are available in left-hand and right-hand versions. These are determined by the location of the short turn. If the short turn is on the left side, from the seated position, the station is designated as left hand. Short turn on the right side is designated as right hand work station or desk.

### WIRING APERTURES

Four standard aperture configurations (maximum for desk or work station) may be specified at the time of purchase as shown here:

### APERTURE LOCATIONS

# GENERAL SPECIFICATIONS

All Cluster 120 Work Stations except machine stations are equipped with a non-locking pencil drawer.

Width at seated position is  $49\frac{1}{4}$ ". Width at outside position is  $69\frac{1}{4}$ ". Maximum depth is  $37\frac{1}{2}$ ".

CORPORATION

Thank you for asking about our Cluster 120 System. We hope that the accompanying literature will answer a few of your questions.

Obviously, you are considering the purchase of office desks at this time. If that is the case, then it is important to ask yourself a number of searching questions:

"Will the desks I finally select help to streamline my office operation?"

"Will my desks give me the flexibility and versatility I need to arrange and rearrange my office layout according to changing or expanding requirements?"

"Will my desks be job oriented as well as people oriented?"

say, think of office desks as much more than furniture . . . think of them as office equipment.

Of course, there are many other questions that will occur to you as you examine our 120 brochure. How, for example can the Cluster 120 System serve your specific needs? We'd like the opportunity to answer these in person.

Helen Michaels, Supervisor  
Customer Services
